EXCELLENCE

## ENVIROSAFE CHEMICALS CANADA PRE-APPROVED TO BUILD CANNABIS FACILITY AND AWARDED INDUSTRIAL HEMP LICENCE IN NORTH BATTLEFORD, SK

*Released on September 17, 2019*

*Highly anticipated pre-approval to build cannabis facility and awarded highly coveted license advances business's diversification plan in the cannabis industry to offer cannabis and high-grade CBD oil*

North Battleford, Saskatchewan — Emerging leader in Saskatchewan cannabis industry, **Envirosafe Chemicals Canada** (Envirosafe) announced today that their application with Health Canada, pursuant to the *Cannabis Act* (Canada) under the *Cannabis Regulations* to become a Cannabis Licence holder (the “Cannabis License”) has been **pre-approved to build a cannabis cultivation and processing facility**, as notified by Health Canada on September 11, 2019. Upon construction completion, Envirosafe will submit a site evidence package to demonstrate the fully built site meets all the requirements of the *Cannabis Regulations* for final inspection wherein they anticipate the award of their Cannabis Licence.

The highly anticipated pre-approval to build a cannabis facility is the ‘greenlight’ Envirosafe has been waiting for to secure funding and begin construction of their cannabis facility.

Additionally, Envirosafe has been **awarded an Industrial Hemp Standard Processing License** from Health Canada, pursuant to the *Cannabis Act* (Canada) (the “Hemp License”), effective August 23, 2019. This highly coveted license is a significant step in

Envirosafe’s plan to process and manufacture products and derivatives from locally grown industrial hemp.

Securing the Hemp License allows Envirosafe to begin production of low-cost, high-quality, extraction of pure cannabidiol (CBD), derived from a sungrown hemp biomass from a local outdoor cultivation site in highly fertile North Battleford, Saskatchewan. Pure CBD extracts will be refined into a CBD oil to then be consumed directly and/or be infused into a range of products for whole distribution.

“These two highly-anticipated announcements are of great significance for Envirosafe’s next steps into cannabis growth and production,” said James R. (Jim) Davey, President and CEO of Envirosafe, “expediting our vision to cultivate and process a high-grade, quality portfolio of clean cannabis products free of additives,” Davey said, “to provide relief from unnecessary suffering , and as an alternative to chemical means by offering a natural resource for healing.”

“We’re also pleased that this allows us to further expand our presence and identity as a Saskatchewan-based company,” continued Davey. “We take great pride in our Saskatchewan roots and we’ve continued to grow and bring prosperity to the region, enhancing our ability to contribute in a meaningful and prosperous way to the Saskatchewan economy.”

## ABOUT US

[Envirosafe Chemicals Canada](#), a unique, environment conscious, bio-science company producing bio-degradable, non-toxic, non-hazardous, environmentally safe products to the industrial specialty chemical and retail markets. For over 25 years, we have been offering excellence to our customers with proven expertise in bio-science, biotechnology, environmental consultation and sustainable solutions. Our corporate headquarters and facility are located in North Battleford, Saskatchewan, Canada.

The cannabis industry is a diversification for Envirosafe Chemicals Canada, poised for success in the cannabis market, with:

- Significant research, development and knowledge base of cannabis, seed-to-patient.
- An active manufacturing and production facility, and additional adjacent property for expansion.
- Authorization for growth and production of medical marijuana in North Battleford including city zoning and unanimous approval from city council and all city emergency services.
- Cannabis Licence Holder Application Pre-approval granted by Health Canada to construct a cannabis facility.
- Completed application submitted to Health Canada for growth and production of cannabis (pending approval based on final inspection of fully built site).

## VISION

Our goal is to cultivate and produce high-quality, industrial hemp and cannabis products for medicinal use. We will provide commercial-scale industrial hemp and cannabis with an unmatched level of environmental control, to develop, refine, and repeat specific growth conditions.

With historical industrial production experience, and significant knowledge of hemp and cannabis production, we aim to be a leader in the industrial hemp and cannabis industry and evolve with the needs of our consumers. We will continue to offer excellence to our customers with proven expertise in bio-science, biotechnology, environmental consultation, sustainable solutions, providing conscious and clean products. Since legislation in Canada's cannabis market in 2018, we continue to successfully diversify and expand emerging as a leader in Saskatchewan's cannabis industry.

## COMMITMENT

We will produce a high-grade of cannabis that our consumer will feel comfortable to use, safe for human consumption and free of toxic additives. Our industrial hemp and cannabis division will provide commercial-scale hemp and cannabis with an unmatched level of control, to develop, refine, and repeat specific growth conditions, and high-grade, clean quality products and derivatives.

We assure the highest quality of cannabis production prior to market. Our impeccable sanitation processes will ensure production, packaging, labeling and storage activities involving cannabis are conducted under strictly controlled conditions. Quality control for products and substances in storage and standard operating procedures, conduct of recalls, complaint management and sample retention, reporting adverse reactions will be paramount by our experienced technical team to ensure compliance within each area and to Health Canada.

We commit to cultivate and produce superior high-grade processed cannabidiol (CBD) oil extracts and derivate infused products and grow high quality clean, pharma-grade cannabis, mindful of our consumer patients needs with the utmost standards and care, while generating significant margins for our investors returns.
